
Introduction to TPM

Understanding TPM and what it means to your business!

Course Objective

TPM (Total Productive Maintenance) is a greatly misunderstood topic. Often seen as a "Lean Tool", TPM is actually a company-wide structured approach to continuous improvement. Applied by many of the world's best companies, TPM can not only deliver great Quality, Cost and Delivery (QCD) results, but also engages the whole workforce in doing so.

Overview

In the Introduction to TPM course we will cover:

- Fundamentals of TPM
- 16 Losses and OEE
- Concept of Zero Breakdowns
- Eight Pillars of TPM
- Focused Improvement and Why-Why Analysis
- Autonomous Maintenance
- Link to Lean

With a combination of theory, practical and case studies, the attendees will develop their understanding from our highly experienced TPM practitioner. There will also be opportunity to discuss methods of implementation highlighting common pit-falls and tips for success.

Who should attend?

The course is aimed at top management considering embarking on a TPM programme, those wishing to refresh their TPM knowledge and anyone inquisitive at what TPM is and what it can deliver.

"Really surprised about how much I learnt, the training was engaging and practical. I feel can go back to my plant and use the techniques with the rest of my team" - Plant Manager.

Total Productive Maintenance

Total Productive Maintenance is logical and structured approach to continuous improvement. With its origins in Japan, TPM has for over 40 years given many of the world's best companies a competitive edge
